

First double-click the file **Atlanton-Typer.ahk** activate the typer, then open a word processor of your choice and set the font to Atlanton.

This typing method involves a series of 'blocks'. Here is the first :

α	a	ɐ
α	a	ɐ
α	a	ɐ
α	a	ɐ

The character **a** in the centre is typed normally on your keyboard. Then you may press any of the four directional arrows (← ↑ ↓ →) to modify the **a** that you have just typed to any of the other letters in the above block. For example, if you press ↑ the **a** will become a superscript ^a ; if you press ↑ again, it will become a combining [̣]. If you press ↓ again, the combining [̣] reverts to a superscript ^a. If you press → the superscript ^a is changed to a superscript ^ɐ. In other words, you may freely navigate around the block as shown above.

Similarly, there is a second writing block centred on the letter **b**, a third centred on **c**, and so on to the end of the alphabet. For a schematic overview of all such blocks, see **Atlanton-Typing-Index.pdf**. Together, these blocks cover every letter and diacritic of the four phonetic alphabets that Atlanton is designed to render.

Most diacritics are covered by one rather large block (listed at the end of the index):

			⋮						⌞
	≡	≈	⋮		”		”	✓	⌞
	—	~	⋮	°	’	‘	’	^	˘
+	-	~	.	°	,	!	/	^	0
+	—	~	⋮	°	,	‘	’	˘	˘
	≡	≈	⋮		”		”		⌞
					”				⌞

It is recommended to use the central characters highlighted in red, which are generally easy to type on any Latin keyboard, as the ‘entry points’ to a block.

To type for instance ċ you may begin with c and place a comma after it, then press the ↑ arrow twice to ‘promote’ that comma first to a combining comma ̣ and then to a combining comma-acute ̣́, which will automatically combine with the preceding c. And so on.

If you want to use temporarily revert the directional arrows (← ↑ ↓ →) to their regular function, e.g. scrolling, you may press them in combination with the **alt** button to do so. Once you release **alt**, the arrows will return to their function of navigating typing blocks as described above.
